Overview

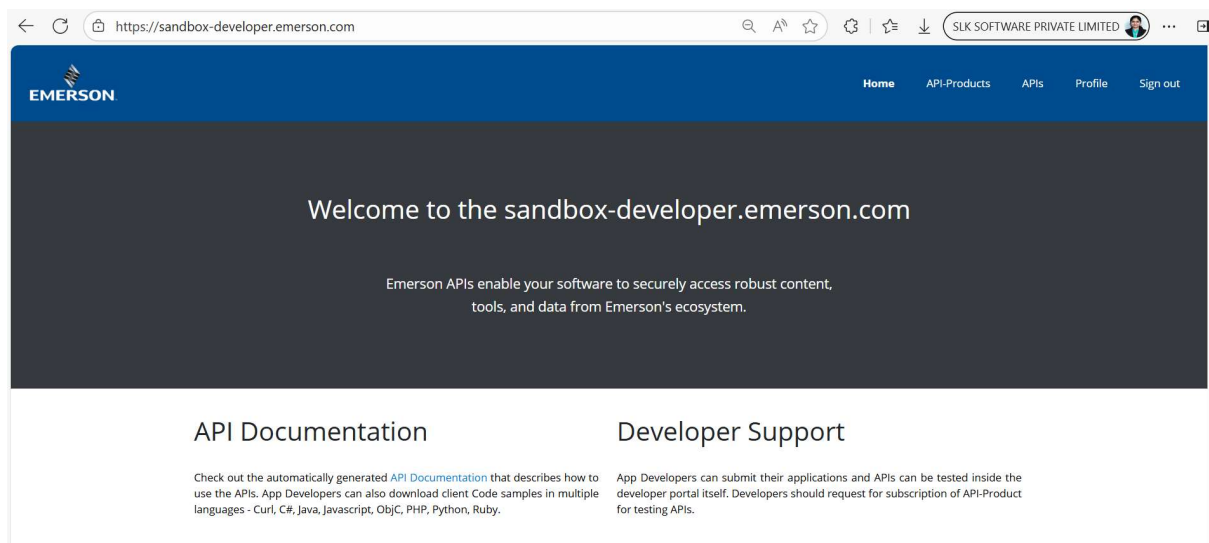

The QuoteAI solution automates quote generation for RFQs by leveraging Oracle APIs to validate item details, fetch customer data, and create quotes. Integration ensures seamless connectivity between Emerson's ecosystem and QuoteAI, enabling accurate pricing and efficient quote processing.

Oracle APIs are deployed in two environments:

- **Sandbox APIs:** Stable, subscription-based APIs accessible outside Emerson's network.
- **ORDS (Oracle REST Data Services):** Lower-level APIs used internally for development before moving to Sandbox.

Sandbox APIs: Emerson APIs enable QuoteAI solution to securely access robust content, tools, and data from Emerson's ecosystem. Sandbox APIs have their API products and multiple APIs will be present inside each product.

sandbox-developer.emerson.com

Profile section will display all the API Products that a user can access.

User profile

POST

Update Global Quote.

Overview

The purpose of this API is to fetch the data from GDM server and store in GQF tables. Global Forms Quote API is a Django REST Framework APIs which is a powerful and flexible toolkit for building Web APIs. Application data is maintained on Betsy database which will be accessed through Django REST Framework, internally interact with Oracle ISG and deployed on Azure. Each API, calls different operations of quote like Global Quote creation (header + lines), fetch quote, price quote. You can send json body as a request and get the desired response in JSON format. Advantage of these APIs is that it can be used individually to perform any transaction. These APIs are designed for various operations of Global quotes from 3rd party applications / Impact partners / LBP

Generate Proposal.

This API can be used to generate proposal for quote and to get email notification along with proposal print.

GenerateProposal

Try it

Each API for

example: **Emerson IT Platform Global Forms API** has usually three environments (Stage, Test and Development) represented as (“”, “T”, “D”).

All the Sandbox APIs can be used outside Emerson network as well.

ORDS APIs: Lower-level APIs in terms of deployment as compared to Sandbox.

- When APIs are developed in Emerson, they are done in ORDS first and then later put in Sandbox for the user to use based on subscription.
- Anyone can use the APIs if they have the API endpoints and credentials.

- User needs to be in Emerson network to use ORDS APIs.

Oracle APIs used in QuoteAI solution

ItemSearchAPI

Purpose: Mapping Legacy part numbers and item description to ISV/VA Part number

Authentication: API Key

Endpoint(Production): POST [Prod/search-item/v1/ITEM_DESC](#)

Endpoint(Stage): POST [/search-item/v1/ITEM_DESC](#)

Endpoint(Development): POST [/search-item-dev/v1/ITEM_DESC](#)

HTTP Method: POST

Headers:

Name	Type	Description
Ocp-Apim-Subscription-Key	string	The subscription key provided by the API owner. It must be included in every request for authentication.
Content Type	string	application/json

Payload:

```
{
  "Item": {
    "MessageHeader": {
      "Sender": {
        "ID": "QUOTEAI"
      },
      "Target": {
        "ID": "OGSI"
      },
      "BusinessGroup": "SSOP",
      "DataArea": {
        "Identification": {
          "ItemNumber": "<<Potential ISV/VA Part Number as a String >>"
        },
        "ItemDescription": {
          "Description": "<<Potential Item Description as a String>>",
          "ItemType": " ",
          "ItemCategory": "ISV,VA"
        },
        "Manufacturer": {
          "Manufacturer": "OLD",
          "ManufacturerPartNumber": "<<Potential Legacy Part Number as a String>>"
        }
      }
    }
  }
}
```

Example Request body schema:

Legacy Part Number	Item Description
<pre>{ "Item": { "MessageHeader": { "Sender": { "ID": "QUOTEAI" }, "Target": { "ID": "OGSI" }, "BusinessGroup": "SSOP", "DataArea": { "Identification": { "ItemNumber": "" }, "ItemDescription": { "Description": "", "ItemType": "", "ItemCategory": "ISV,VA" }, "Manufacturer": { "Manufacturer": "OLD", "ManufacturerPartNumber": "%3SDC28001696%" } } } } }</pre>	<pre>{ "Item": { "MessageHeader": { "Sender": { "ID": "QUOTEAI" }, "Target": { "ID": "OGSI" }, "BusinessGroup": "SSOP", "DataArea": { "Identification": { "ItemNumber": "" }, "ItemDescription": { "Description": "%SERV K.MINOR G3- 00 DRIVE MOD%", "ItemType": "", "ItemCategory": "ISV,VA" }, "Manufacturer": { "Manufacturer": "OLD", "ManufacturerPartNumber": "" } } } } }</pre>

Response Schema :

<pre>{ "OutputParameters":{ "@xmlns": "string", "@xmlns:xsi": "string", "O_ERROR_FLAG": "string", "O_ERROR_MSG": <<Error message as string>>, "ITEM_INFO_REC_ITEM":[{ "INVENTORY_ITEM_ID": <<ID of the Mapped Part Number as a QuoteAI is not using this ID>>, "ITEM_NUMBER": <<Mapped Part Number as String >>, "ITEM_DESCRIPTION": <<A short Description of the Item as a String>>, "LONG_DESCRIPTION": "string", "ICC": "string",</pre>	<pre>Number ,</pre>
--	---------------------

ModelListPriceAPI

Purpose: Part Number / ModelString /Bundle Model of each line in RFQ is checked if it is Valid or Invalid through this API. Only Valid items will get added to the Quote.

Authentication: API Key

Endpoint(Production): POST [Prod/ModelConfig/v1/modellistprice](#)

Endpoint(Stage): POST [/ModelConfig/v1/modellistprice](#)

Endpoint(Development): POST [/ModelConfig-dev/v1/modellistprice](#)

HTTP Method: POST

Headers:

Name	Type	Description
Ocp-Apim-Subscription-Key	string	The subscription key provided by the API owner. It must be included in every request for authentication.
Content Type	string	application/json

Payload:

```
{  
  "partNumber": <<ISV/VA part number as string>>,  
  "modelName": "",  
  "modelString": <<Model string as string>>,  
  "childModel": [  
    {  
      "childModelName": "",  
      "childModelString": ""  
    }  
  ],  
  "division": "ISV",  
  "quantity": "1",
```

```
{
  "currencyCode": "USD",
  "pricingRegion": "US",
  "pricingDate": "",
  "orgId": <<Organisation ID as string>>,
  "customerAccountNumber": <<Customer EBS ID as string>>
}
```

Example payload schema:

ISV/VA Part Number	Model String
<pre>{ "partNumber": "ISV-1342632", "modelName": "", "modelString": "", "childModel": [{ "childModelName": "", "childModelString": "" }], "division": "ISV", "quantity": "1", "currencyCode": "USD", "pricingRegion": "US", "pricingDate": "", "orgId": "9907", "customerAccountNumber": "151624641" }</pre>	<pre>{ "partNumber": "", "modelName": "", "modelString": "EF1S-0020R3A100A1- CAS00S0T0P0IL", "childModel": [{ "childModelName": "", "childModelString": "" }], "division": "ISV", "quantity": "1", "currencyCode": "USD", "pricingRegion": "US", "pricingDate": "", "orgId": "9907", "customerAccountNumber": "151624641" }</pre>

Response Schema

```
{
  "partNumber": <<Input ISV Part Number as string>>,
  "productID": <<Unique ID for the part>>,
  "productStatus": <<Status of the product>>,
  "productDescription": "string",
  "modelName": "string",
  "modelString": "string",
  "configHeaderId": "string",
  "configRevNum": "string",
  "currencyCode": "string",
  "quantity": "string",
  "listPrice": <<Price of the item>>,
}
```

```

"sellingPrice": <<Price after discount>>,
"childModel": [],
"division": "ISV",
"pricingRegion": "US",
"pricingDate": <<Time and Date>>,
"configValid": "string",
"result": "string",
"errorMsg": <<Error message as string>>,
"errorFlag": "string",
"errorCode": <<Error code for the specific partnumber>>
}

```

Example for Response schema

ISV/VA Part Number	Model String
<pre> { "partNumber": "ISV-1342632", "productID": "35201122", "productStatus": "ACTIVE", "productDescription": "RDC MG others;-component pneum., Repair/spare;SERV K.MINOR G3- 00 DRIVE MOD; VA126432", "modelName": "", "modelString": "", "configHeaderId": "", "configRevNum": "", "currencyCode": "USD", "quantity": "1", "listPrice": "685.81", "sellingPrice": "514.36", "childModel": [], "division": "ISV", "pricingRegion": "US", "pricingDate": "2025-10-16 16:17:31", "configValid": "", "result": "TRUE", "errorMsg": "No Error Message", "errorFlag": "N", "errorCode": "NO_ERROR" } </pre>	<pre> { "partNumber": "", "productID": "", "productStatus": "", "productDescription": "", "modelName": "", "modelString": "", "configHeaderId": "", "configRevNum": "", "currencyCode": "", "quantity": "", "listPrice": "", "sellingPrice": "", "childModel": [], "division": "", "pricingRegion": "US", "pricingDate": "2025-10-16 16:28:58", "configValid": "", "result": "FALSE", "errorMsg": "Model Configuration status is false", "errorFlag": "E", "errorCode": "INVALID_CONFIGURATION" } </pre>

Validation API Error Handling

Error Code	Action Taken
------------	--------------

VALID	Add to quote
MODEL_STRING_MISMATCH	Use suggested model string if valid
INVALID_CONFIGURATION	Ignore; do not add to note or quote
MISSING_MODEL_SETUP	Ignore; do not add to note or quote
INVALID_ITEM	Ignore; do not add to note or quote

CustomerPartyAPI

Purpose: API to fetch customer details

Authentication: API Key

Endpoint(Production): GET --[Prod//customerparty/v1/customerparty](#)

Endpoint(Stage): GET [/customerparty/v1/customerparty](#)

Endpoint(Development): GET [/customerparty-dev/v1/customerparty](#)

HTTP Method: GET

Headers:

Name	Type	Description
Ocp-Apim-Subscription-Key	string	The subscription key provided by the API owner. It must be included in every request for authentication.
senderId	string	value: "AUTOBOT"
targetId	string	value: "OGSI"
businessGroup	string	value: "GRP"

Payload :

```
{
  "DestinationSystem": "string",
  "CustomerNumber": "string"
}
```

Example Payload schema:

```
{
```

```
"DestinationSystem": " EPM_AE_OU_DXBSO ",  
"CustomerNumber": "151624641" }
```

Response Schema:

```
{  
  "CustomerParty": {  
    "DataArea": {  
      "Identification": [  
        {  
          "ID": "string",  
          "RegistrationID": "string",  
          "CustomerName": "string",  
          "AlternateCustomerName": "string",  
          "AccountDescription": "string",  
          "PartyNumber": "string",  
          "PartySiteNumber": "string",  
          "PartySiteId": "string",  
          "MailtoInvoiceCustPartyName": "string",  
          "CustomerID": "string",  
          "CustomerNumber": "string",  
          "Location": [  
            {  
              "Consol": "string",  
              "MailtoInvoice": "string",  
              "MailInvoicetoID": "string",  
              "Address": [  
                {  
                  "CityName": "string",  
                  "StateName": "string",
